  Hard questions and honest answers

How to use this PDF

Read the bold question, answer in 20-40 seconds, then use the hammer line when judges push back. Do not overclaim: strong honesty beats fake confidence.

ACERE

What judges may ask

A practical defense guide for problem, solution, regulation, technology, market, business, limitations and live demo questions.

01	Problem	4 Qs
02	Solution	4 Qs
03	Key Features	5 Qs
04	Business Model	4 Qs
05	Technical Approach	3 Qs
06	Impact	4 Qs
07	Feasibility	2 Qs
08	Demo Script	2 Qs
09	Strong Closing	2 Qs

Problem

Q1. Problem statement

Aaj ke time mein international trade sirf product quality par depend nahi karta. Buyer proof maangta hai: product kahan se aaya, kis supplier se aaya, land deforestation-free hai ya nahi, production mein fuel/electricity kitni lagi, invoices aur shipment documents consistent hain ya nahi. Large companies ke paas compliance teams hoti hain, but MSMEs ke paas usually proper system nahi hota.

Hammer line: MSMEs are losing confidence because compliance is becoming complex.

Q2. Real-life example

Imagine ek small coffee exporter hai Karnataka se. Uske paas EU buyer hai. Buyer bolta hai: mujhe farm plot location, supplier details, EUDR proof, invoices, packing list, shipment details, aur due-diligence summary chahiye. Exporter ke paas data hai, but scattered hai. Farm ka location alag file mein, invoice email mein, shipment paper PDF mein, supplier declaration WhatsApp par, aur koi central report nahi. Buyer ko trust nahi banta, verification slow hoti hai, order delay hota hai.

Hammer line: Problem data ki kami nahi, organized evidence ki kami hai.

Q3. Why this is serious

EUDR aur CBAM jaise regulations ke baad exporters ko sirf bolna nahi padega ki product compliant hai; unhe prove karna padega. Agar MSME proof clean way mein nahi de paata, toh EU buyer safer option choose karega - usually larger exporter. Iska direct impact small businesses ke export opportunities par hota hai.

Hammer line: Compliance gap can become market-access loss.

Q4. Current way of working

Currently many exporters manually documents collect karte hain, Excel maintain karte hain, PDFs forward karte hain, aur verifier/importer ke questions ka reply baar-baar dete hain. Ye process slow, error-prone, stressful, and non-scalable hai. Har shipment ke liye same confusion repeat hoti hai.

Hammer line: Manual compliance does not scale.

Solution

Q1. Our solution

CarbonTrace AI ek role-based compliance platform hai. Exporter company profile fill karta hai, suppliers add karta hai, plot map ya GeoJSON upload karta hai, EUDR analysis run karta hai, documents upload karta hai, extraction review karta hai, facilities and production batches add karta hai, shipment create karta hai, report generate karta hai, verifier ko submit karta hai, and finally importer approved package download karta hai.

Hammer line: One platform, one shipment package, complete evidence chain.

Q2. Exporter workflow

Exporter ke liye flow simple hai: Profile complete karo, supplier add karo, plot map karo, EUDR check run karo, documents upload karo, OCR/extraction review karo, facility and production data add karo, shipment create karo, report generate karo, verifier ko submit karo.

Hammer line: Guided compliance instead of scattered paperwork.

Q3. Verifier workflow

Verifier ko ek queue milti hai jahan shipment cases visible hote hain. Verifier shipment summary, plot result, uploaded documents, extracted fields, facility/batch data, and audit trail review karta hai. Then approve, reject, ya clarification request kar sakta hai.

Hammer line: Verifier ko email hunting nahi karni padti.

Q4. Importer workflow

Importer sirf approved shipments dekhta hai. Usko clean summary, important documents, EUDR/CBAM status, verifier decision, and download package milta hai. Importer ke liye platform read-only and trust-focused hai.

Hammer line: Importer gets confidence, not chaos.

Key Features

Q1. Feature 1: EUDR plot analysis

Exporter plot draw ya GeoJSON upload karta hai. Backend Google Earth Engine ke through land-risk screening karta hai. Isse EUDR workflow sirf form-fill nahi rehta, balki real geospatial analysis visible hota hai.

Hammer line: EUDR is the strongest technical proof point.

Q2. Feature 2: Document upload and extraction

Exporter invoices, bills, packing list, fuel bills, electricity bills, supplier declarations, and production logs upload kar sakta hai. System category detect karne aur fields extract karne mein help karta hai. Human review ke baad data save hota hai.

Hammer line: AI assists, human verifies.

Q3. Feature 3: Facilities and production

CBAM ke liye platform facility and production-level data capture karta hai: electricity, fuel, batch quantity, production records, and linked evidence. Yeh future detailed emissions calculation ke liye strong base banata hai.

Hammer line: CBAM starts with structured production data.

Q4. Feature 4: Reports

Platform ek official-looking compliance report generate karta hai jisme shipment ID, exporter, importer, EUDR status, CBAM status, verifier decision, generated date, evidence summary, and downloads included hote hain.

Hammer line: Report is the proof moment.

Q5. Feature 5: Audit trail

Every important action track hota hai: document upload, extraction review, plot analysis, shipment creation, verifier decision, importer download. Isse accountability and traceability improve hoti hai.

Hammer line: Audit trail makes the system defensible.

Business Model

Q1. Business model

Humara business model B2B SaaS + shipment credits ho sakta hai. Exporters monthly subscription le sakte hain, aur har compliance package/shipment ke liye credits use kar sakte hain. Verifier workspace and importer dashboard paid add-ons ho sakte hain. Industry associations ya EU buyers apne supplier network ke liye sponsor bhi kar sakte hain.

Hammer line: Subscription plus shipment credits fits exporter behavior.

Q2. Target customers

Initial target MSME exporters hain jo EU buyers ke saath kaam karte hain ya karna chahte hain. Sectors include coffee, agro-commodities, rubber, timber-linked products, steel, aluminium, and other compliance-sensitive exports. Secondary customers verifiers, consultants, importers, and export associations hain.

Hammer line: Start with exporters facing buyer pressure now.

Q3. How we reach MSMEs

Hum MSMEs tak export promotion councils, MSME associations, commodity boards, chambers of commerce, FPO networks, logistics partners, sustainability consultants, and EU buyer networks ke through reach karenge. Best entry point hoga compliance-readiness pilot: one exporter, one shipment, one verified package.

Hammer line: Go where exporters already ask for help.

Q4. Why MSMEs will pay

MSMEs will pay because this saves time, reduces buyer friction, avoids repeated document requests, creates professional reports, and helps protect export orders. Agar ek order delay ya reject hone se bach jaata hai, platform value clear ho jaati hai.

Hammer line: MSMEs pay when software protects revenue.

Technical Approach

Q1. Tech stack

Frontend React + Vite par built hai, Firebase Auth/Firestore/Storage/Hosting infrastructure provide karta hai, Flask backend EUDR and Earth Engine analysis support karta hai, Google Maps/GeoJSON plot workflows handle hote hain, and report/download modules compliance package create karte hain.

Hammer line: Modern frontend, Firebase infra, specialist geospatial backend.

Q2. Why Firebase and Flask both?

Firebase fast authentication, database, file storage, and hosting ke liye perfect hai. Flask backend specialized geospatial/EUDR computation ke liye useful hai because Earth Engine analysis server-side better controlled hota hai. Dono ka combination MVP ke liye practical and scalable hai.

Hammer line: Firebase runs the app; Flask handles specialist analysis.

Q3. Why human-in-the-loop?

Compliance mein blindly AI output accept karna risky hai. Isliye extraction review screen hai jahan user extracted data verify and correct karta hai. Original document linked rehta hai, so later verifier ko source proof milta hai.

Hammer line: Trust comes from AI plus review, not AI alone.

Impact

Q1. Exporter impact

Exporter ke liye benefit hai faster documentation, fewer mistakes, better buyer trust, professional compliance packages, and higher readiness for regulated markets. Small exporter ko bhi enterprise-like compliance workflow milta hai.

Hammer line: MSME becomes more export-ready.

Q2. Importer impact

Importer ko approved shipment package milta hai, jisme important documents, status, report, and verifier decision included hote hain. Isse procurement and internal compliance teams ka workload reduce hota hai.

Hammer line: Importer gets clean, downloadable confidence.

Q3. Verifier impact

Verifier ko structured cases milte hain instead of random files. They can compare evidence, review extraction, check EUDR result, and record decisions. This improves speed and consistency.

Hammer line: Verifier gets context, not clutter.

Q4. Social and economic impact

CarbonTrace AI small exporters ko global compliance expectations ke against stronger banata hai. Agar compliance tools sirf large companies ke paas rahenge, toh MSMEs market se bahar ho sakte hain. Our product makes compliance more accessible.

Hammer line: Inclusive compliance protects small businesses.

Feasibility

Q1. Why this is feasible

The workflow is already clear: exporter data, supplier data, plot data, uploads, shipment, report, verification, importer download. Technology components also exist: web app, Firebase, storage, maps, Earth Engine backend, reports, and role-based workspaces. Next phase is production hardening and pilot testing.

Hammer line: The idea is not theoretical; it is buildable and demonstrable.

Q2. What is honest limitation

We are not claiming this is a final legal certification engine. CarbonTrace AI is a compliance workflow, evidence management, screening, and reporting platform. Final legal responsibility depends on official rules, correct data, and expert review. This honest positioning makes the product credible.

Hammer line: We support compliance; we do not fake certification.

ACERE

Demo Script

Q1. Demo opening

First I will show exporter workspace. Yahan exporter apni readiness dekhta hai. Then we open profile, supplier, plot, and EUDR result. After that we show uploads and extraction review. Then we create/open shipment and generate compliance report. Finally verifier approves and importer downloads final package.

Hammer line: Demo the journey from source to buyer.

Q2. Demo closing

This is the complete story: an MSME exporter starts with scattered data, CarbonTrace AI organizes it into linked evidence, verifier reviews it, and importer receives approved package. That is how we convert compliance pressure into export confidence.

Hammer line: Scattered evidence becomes export confidence.

Strong Closing

Q1. Final closing statement

Sir/Ma'am, humara project sirf ek dashboard nahi hai. Ye MSME exporters ke liye global trade ka bridge hai. Jab regulations tough ho rahe hain, hum chahte hain small exporters bhi confidently bolein: our product is ready, our evidence is ready, and our shipment is ready for global buyers.

Hammer line: CarbonTrace AI helps MSMEs prove, not just claim.

Q2. Final punch line

CarbonTrace AI ka goal simple hai: MSMEs ko compliance se darana nahi, unhe compliance-ready banana. Team ACERE wants Indian exporters to ace EU compliance and win global trust.

Hammer line: Ace compliance. Win trust. Grow exports.

ACERE

Last-minute judge lines

One-line pitch

ACERE converts scattered exporter evidence into verifier-approved compliance packages importers can trust.

Problem

The issue is not that exporters have no documents; the issue is that the documents are not linked to shipment proof.

EUDR

We connect plot geometry, EUDR screening and shipment evidence.

CBAM

We structure facility, installation, fuel, electricity and batch evidence as the foundation for deeper CBAM calculations.

AI

AI assists extraction, but human review keeps the evidence accountable.

Honest limitation

This is a strong MVP and demo workflow; production needs legal validation, security hardening and official export testing.

Winning close

Exporter prepares, verifier trusts, importer downloads - that is the complete compliance story.
